Layered Defenses and Flexible Configuration
Improve Server Performance and Security

SecurityGateway for Email Servers combines over two decades of email security expertise with proven security technologies to protect businesses from the latest email-borne threats. Using multiple security methods, SecurityGateway assures the accurate delivery of legitimate email while blocking out spam, malware and other unwanted junk.

SecurityGateway incorporates multiple AV engines and proactive Outbreak Protection technology combined with additional signature recognition and heuristic analysis to detect viruses, spam, phishing, ransomware and other types of unwanted and harmful email.

Data Leak Prevention rules allow administrators to easily filter messages containing sensitive information such as credit card numbers, Social Security numbers, and other types of sensitive data.

Message encryption, e-sign, and track & prove services powered by RPost provide additional privacy, collaboration, and verifiable proof of delivery, time, and exact message content.

For companies that do not have legitimate business in certain geographical locations, Location Screening allows administrators to block connections from specific countries.

SecurityGateway’s email archiving features provide a fully indexed and searchable repository of all messages sent and received - for both administrators and end users, with advanced search and options for downloading archived messages or restoring them to the mailbox, plus retention policies and legal hold for regulatory compliance.

Key Features

- **Accurate Threat Detection**
  Multiple analysis tools for blocking the latest threats
  - AntiSpam
  - AntiVirus
  - AntiPhishing
  - AntiSpoofing

- **Data Leak Prevention**
  An easy-to-use interface allows policies to be created which detect and prevent the unauthorized transmission of sensitive information outside of your network.

- **Expanded Security Services**
  Email encryption, e-sign, and email track & prove deliverability powered by RPost.

- **Defense Layer Customization**
  Administrators can improve server performance by prioritizing the order in which specific security rules will execute when analyzing incoming or outgoing email traffic.

- **Comprehensive Reporting**
  Identify email traffic patterns and potential problems with comprehensive reporting. All reports support point-and-click drill-down targeting for easy analysis of trends and issues.

- **Integrated Archiving**
  All inbound and outbound email messages can be archived for added protection against disasters. Retention policies and Legal Hold help businesses meet regulatory compliance requirements and litigation needs.
System Requirements

- Microsoft Windows 10/2016|2012|7|2008|Vista|2019 (including 64-bit versions)
- CPU 800MHz or higher (dual core CPU 2.4GHz or higher recommended)
- 512 MB RAM (2 GB recommended)
- Network Interface Card
- TCP/IP network protocol installed
- NTFS volume with minimum of 500MB free space
- Any modern web browser

Key Benefits

- **Easy Administration.** Intuitive, task oriented, responsive interface allows already overworked administrators to perform common actions with minimal effort. Administrative responsibilities can be delegated to a domain administrator. End users are empowered to determine the fate of a message without the need to contact the administrator.

- **Proven Threat Detection.** Multiple security tests, including multiple antivirus plug-ins, deliver enterprise-class protection against hidden threats in both inbound and outbound email.

- **On-Premise or Hosted Deployment.** Per-user options for both commercial hosting and on-premise subscriptions available.

- **Investment Protection.** Receive free upgrades to the latest product versions for the duration of the subscription term.

SecurityGateway Configuration and Features

**External Threat Protection**
- **AntiSpam**
  - Heuristic and Bayesian
  - DNS and URI Blacklists
  - Message Certification
  - Greylisting
  - Backscatter Protection
  - Message Scoring

- **AntiVirus**
  - Multiple AV engines
  - Threat Signature Updates
  - Recurrent Pattern Detection (RPD)
  - Zero-Hour Outbreak Protection

- **AntiSpoofing**
  - Reverse Lookups
  - Callback Verification

- **Email Authentication**
  - DomainKeys Identified Mail
  - Sender Policy Framework (SPF)
  - DMARC

- **AntiAbuse**
  - Relay Control
  - SMTP Authentication
  - IP Shielding
  - Dynamic Screening and DDoS
  - Location Screening
  - Tarpitting

- **Filtering**
  - Multiple Search Strings
  - Message Content Filter
  - Preset File Types
  - Attachment Filtering

- **Blacklists**
  - Blacklist Addresses

**Internal Threat Protection**
- **Data Leak Prevention**
- **Policy Enforcement via Sieve Filtering Language**
- Encryption: SSL & TLS
- Redirect HTTP to HTTPS

- **Administrator Options**
  - Multiple Languages
  - Flexible User Interface
  - Domains and Users
  - Per User Options
  - Automatic Domain & User Creation
  - User Verification Source Options
  - Global & Domain Admin Settings
  - Unlimited Account Aliases
  - Multiple Domain Mail Handling
  - Per-Domain IP Addresses
  - Message Quarantine Options
  - Domain Level Access
  - User Level Access

- **Database Maintenance**
  - Data Retention Settings
  - External Database Support

- **Disclaimer in Headers/ Footers**

- **Terms of Use**
- **Archiving**

- **Performance Features**
  - Defense Layer Customization
  - Bandwidth Throttling
  - Logs & Reports
  - Detailed Logs
  - Message Logs
  - Message Log Filtering
  - Historical Logs
  - Real-Time Charting Reports
  - Summary Report
  - Inbound/Outbound Email Reports
  - AntiSpam/AntiVirus Reports
  - Local User Reports
  - Scheduled Statistics Report

- **Expanded Security Services**
  - Message Encryption
  - E-Sign
  - Track & Prove Services
